\$4700.00

This HYD mule was a known working unit from Conoco Philips when they operated Falcon 20s. They sold it to me a working unit. I can guarantee it to be functional. 3 Phase 220 A/C or 440 A/C volts needed to operate it . There is no integral self-contained 5606 fluid tank it relies on the aircraft reservoir. Can be adapted to any aircraft up to 3000 PSI easily.
